Wilmington Jan 29 1881

Dear Mr. Watson,

I do not remember to have received the Cyperaceae from Mr. Austin (and especially not the roots) from Mrs Austin. Probably she has sent them to some one else. I will keep a sharp lookout however and if I find any dried among any specimens, I will send them to you.

I have a faint remembrance of an orchid in pot having been sent me from Col. a two leaved plant looking a little like C. acaule but with several flowers. It is laid away somewhere for future examination and will turn up some day

Your route was made the day

ref— I left him for the Mt. of
N. Carolina and I did not get it
until yesterday. I send today a
set of Hypericum Buckleii studs,
as the last time, St. Jo. said
was wanted at the garden.

I did not get much, my principal find, being the alum, Schweinitzia in fruit, and the rare Sarracenia Carolineana. Specimens of these or of anything else I may have you are welcome to if desired.

Yours truly,

Asa Gray
